Dr. Martins is a polymath, a researcher, an entrepreneur, a public speaker, and a life and health extension advocate. As a polymath, Dr. Martins usually likes to make use of different subject areas, drawing ideas and concepts from different bodies of knowledge to solve specific problems. As an illustrative example, some of his published papers involve several fields of research, including: neuroscience, nanotechnology, nanomedicine, nanorobotics, computer science, and others. Several educational experiences have supported and nurtured Dr. Martins's polymath approach to problems.

As a researcher, Dr. Martins is interested in technological developments with potential to solve humanity's most challenging problems in healthcare, education, work, humanity's existential risks, among others. Dr. Martins is currently focused on developing technologies which will hopefully have a significant impact on human healthy life extension. Dr. Martins' research work was featured in the world's media, including: Fox News Channel, New York Post, The SUN, Daily Mail, Irish Times, Science Daily, The Times of India, National Geography Poland, among other worldwide media. Dr. Martins is currently an affiliated researcher at CREA at the University of California Berkeley, in the United States. Between 2016 and 2019, Dr. Martins was an affiliated researcher at the Lawrence Berkeley National Laboratory, LBNL, in the United States. One of Dr. Martins' published papers, "Human Brain Cloud Interface" is on the TOP 10 most viewed papers ever on Frontiers of neuroscience. Being on the TOP 10 is a serious recognition from the scientific community of the importance of the paper, especially because Frontiers of Neuroscience has more than 8,600 (eight thousand and six hundred) published research papers and is currently the world's most cited journal in the field of neuroscience, ahead of the prestigious journal "Nature" and the journal "Neuron". Dr. Martins' scientific work has involved collaborations with worldwide universities, including the University of California San Diego, University of Miami, Duke University, Moscow State Medical University, Purdue University, Monash University, Institute for Molecular Manufacturing, among others.
